1 Introduction

The ClassMate application is a student life management application that aims to help students manage their academic lives. It will empower students to complete tasks more efficiently by creating a centralizing hub for course summaries, assignment tracking, grade monitoring, and personal reminders. It will also allow students to connect with each other to facilitate group interactions.

This document outlines the scope, objectives, and stakeholders involved in the development of ClassMate. It ensures a shared understanding among team members, instructors, and stakeholders before detailed design and implementation begin. By defining the system's high-level goals and constraints, the vision document provides a foundation for future development efforts and serves as a reference point throughout the project lifecycle.

1.1 Purpose

This document is designed to communicate the vision, scope, stakeholders, and high-level capabilities of ClassMate to provide all parties with a common understanding and can sign off before detailed requirements and design proceed.

1.2 Scope

The project will deliver a working MVP of ClassMate, a web-based student life management application that allows students to track coursework and marks, view grade projections, and receive reminders for deadlines and academic drop dates.

Scope	Description
Mark monitoring	A system to track marks entered by the student. It will show current grades, per class and overall. Projections will be provided to allow students to see the trajectory of their progress.
Task tracking	Assignments and milestones can be added with dates to help students plan their current and future workload. A completion tracker

Project Vision Document

October 2, 2025

	will act as a quantifiable progress report.
Notification system	Default and user-created notifications can be attached to various items in the system. Students can be reminded of upcoming due dates as well as user-created reminders such as study notes to review or alerts for assignment checkpoints.
User documentation	Clear and concise user documentation will be provided with ClassMates software. This main point of interaction will be inside the software itself. A downloadable copy will also be available.

Out of Scope	Description
Expense management tools	An in-app budgeting tool that can track income and expenses to allow tracking of school (and other) expenses. Will provide timely cash flow information to ensure shortfalls are highlighted in advance.
Social features	A communication system for students to contact other ClassMate users. Group projects can be organized via messages and file sharing.
Brightspace integration (API)	Use the Brightspace API to request information such as assignments, quizzes, and grades and populate the system. Will allow for ClassMates to periodically check for changes that could affect the student.
Advanced analytics	A deeper quantitative analysis of marks and submission trends. For example, using all submission data to inform a student of trends such as frequently late or missed lab submissions.

1.3 Definitions, Acronyms, and Abbreviations

Term	Explanation
MVP	Minimum Viable Product
CRUD	Create, Read, Update, Delete
API	Application Programming Interface
HLR	High-Level Requirement
LMS	Learning Management System such as Blackboard and Brightspace.

1.4 References

Reference File Name	Version	Description
Meeting Minutes	1.1	Each team member explains their idea for the project and we vote on the ideas.
Meeting Minutes	1.2	Confirmed our decision to continue with the ClassMate idea.
Project Summary Document	1.0	This document includes the project problem statement, objectives, defined scope, identified stakeholders, potential risks, and success criteria.
High Level Requirements Document	1.0	Functional and non-functional requirements, assumptions, constraints, and external stakeholders listed; data-flow diagram omitted per instructor guidance.

2 Positioning

2.1 Business Opportunity

ClassMate is a student life management system that allows busy students to efficiently manage and track their studies and maximize their learning potential.

2.2 Problem Statement

The Problem of	missed deadlines
affects	students
the impact of which is	stress and poor performance
a successful solution would be	provide timely reminders.

Table 1 Problem Statement

The Problem of	lack of visibility into academic progress
affects	students
the impact of which is	academic goals that are not achieved
a successful solution would be	provide up to date mark breakdowns to track progress.

The Problem of	time management issues
affects	students
the impact of which is	additional stress of rushing forgotten tasks
a successful solution would be	generating a visual timeline of items that are due.

2.3 Product Position Statement

For	Students
Who	who struggle to stay organized
ClassMate	is a student life management system
That	Provides tracking and analysis of studies
Unlike	Brightspace
Our product	Offers a visually appealing and easy to use platform.

Table 2 Product Position Statement

2.4 SWOT Analysis

<Reference: <https://www.businessballs.com/strategy-innovation/swot-analysis/>>

Strengths	Weaknesses
● Simple UI ● Created by students for students ● ClassMates users can communicate ● Core product can be easily added to ● Technical complexity is moderate	● Manual data entry required ● Accuracy depends on user input ● Limited financial resources ● Developer team is relatively inexperienced ● Will rely on free products that could incur costs with volume
Opportunities	Threats
● Expansion to mobile platforms ● Integration with LMS/calendars ● AI-driven study recommendations ● Include a budgeting tracker ● Large total addressable market ● Adding language support	● Competing planner apps ● Reliance on device notification settings ● 3rd party services could raise prices

2.5 Stakeholder Summary

Stakeholder Name	Represents	Role
End Users – Students (FY commuter, Part-time/mature, International)	Primary users of ClassMate	Use the app to manage courses, items, tasks, and grades; provide feedback and acceptance.
Academic Advisor	External academic support	Reviews student progress; influences summary/overview needs; validates priorities.
Course Instructor (Professor)	Sponsor/client proxy	Reviews documents, gives feedback, and signs off on scope/HLR for the course context.
Registrar's Office	Academic calendar authority (add/drop dates)	Supplies reference dates and policies that drive reminders and compliance constraints.
Development Team	Internal engineering	Implements, tests, documents, and maintains the MVP within course constraints.

Table 3 Stakeholder Summary

2.6 User Summary

User Name	Description	Responsibilities	Stakeholder
[Name the user]	[Briefly describe what they represent with respect to the system.]	[List the user's key responsibilities with regard to the system being developed; for example: captures details produces reports coordinates work and so on]	[If the user is not directly represented, identify which stakeholder is responsible for representing the user's interest.]
Student – First-year commuter	New students balancing commute/time; needs simple, fast interactions.	Capture courses/items, check dashboard daily, act on reminders, mark items complete.	End Users – Students
Student – Part-time	Works/studies in parallel; needs concise planning and progress snapshots.	Plan tasks around work, review projections, set grade goals/alerts, maintain up-to-date records.	End Users – Students

User Name	Description	Responsibilities	Stakeholder
Student – International	Faces time-zone/language hurdles; needs clear labels and reliable reminders.	Configure time-zone/reminders, track drop dates, review summaries, keep notes for meetings/advising.	End Users – Students

Table 4 User Summary

3 Stakeholder Requirements

ID	Requirement	Stakeholder
SR-01	Minimize steps to record grades/tasks	Student – First-year commuter
SR-02	Provide a concise dashboard of upcoming events.	Student – Part-time / mature
SR-03	Time-zone-aware reminders.	Student – International
SR-04	Use per-course add/drop dates as reference to drive proactive reminder notifications.	Registrar's Office
SR-05	Offer accessibility options (high/low contrast, dark mode, adjustable font sizing).	Accessibility Services
SR-06	Expose course-level summaries that can be referenced during advising conversations.	Academic Advisor
SR-07	Allow best-of and bonus rules that reflect common syllabus grading practices.	End Users – Students

Table 5 Stakeholder Requirements

4 System Features

ID	Feature	Stakeholder Requirement ID
	How you solve the problem	
F-01	Course and assessment management	SR-01
F-02	Graphical UI including calendar	SR-02
F-03	Time zone conversion and option to display multiple zones (e.g., school and local)	SR-03

ID	Feature	Stakeholder Requirement ID
F-04	Event-driven notifications based on key dates such as last day to drop courses	SR-04
F-05	Dark mode and ability to customize UI color scheme	SR-05
F-06	Flexible grade calculator that can be customer based on submission type and weighting	SR-07

Table 6 System Features

5 Assumptions

- Students have regular internet access and devices
- Users are familiar with course deadlines
- Academic calendars available for manual entry
- Users interact daily with the app
- Devices support push notifications
- Students prefer digital over paper planners
- Advisors and faculty will review summaries

6 <List all assumptions made about any of the content provided in this document. Assumptions should be applicable to the scope, desired solution, requirements, business process, and stakeholders >

- As students, the developers assume they are knowledgeable about the needs of students
- All items within scope are assumed to be reasonably achievable
- All items out of scope are assumed to be achievable, but not a 'necessary' core item
- As student, the design team assumes they know the needs of students in general
- It is assumed that there are affordable tech stacks available to realize application's goals
- This document is able to properly communicate the goals of the application
- This document is easily understandable by both technical and non-technical individuals
- All stakeholders are aligned with the goals of the application
- The creation of this application will be lost cost and easily affordable
- All tech stacks required to implement the application are readily available

7 Constraints

- Must be delivered within academic semester timeline
- Limited to student project budget
- Restricted to one platform MVP (web/Android)
- Manual data entry required (no LMS integration)
- Notifications limited by device settings
- Requires consistent student usage
- Dependent on availability of academic calendar data

<List any process constraints, external constraints or other dependencies >
